

SpeedMaster

Generated on 01.11.2018

Detailed description

SpeedMaster bi-folding trackless speed gates are the ideal solution where speed of opening and closing is essential or where space is at a premium. The gates typically open at more than twice the speed of a traditional swinging gate of the same size which ensure a fast throughput of traffic while maintaining security of the site.

Uses a PLC controlled, inverter drive three phase motor, worm and wheel gearbox with a direct drive shaft connected to the gate leaf, which ensures a smooth and positive movement. The speed gates are rated for 100% duty cycle (continuous operation).

Manufactured using rectangular hollow steel (RHS) frame and circular hollow section (CHS) steel infills. A wide range of alternative infills are available to suit customer requirements and to match adjoining fencing design. Also available are spiked tops, warning lights and sirens if required.

Suitable for industrial and retail parks, data centres, airports and seaports and MOD establishments.

Features:

- Secure design which significantly reduces tailgating.
- Range of infill options available.
- Smooth operation.
- RAL colours available.
- Catch plate for security.
- Safety edges as standard.
- Heavy duty hinges.

Applications:

- Industrial and retail parks.
- Data centres.
- Airports and seaports.
- Ministry of Defence (MOD).
- CE approved.

Product guidance - As Standard

Finish/ Colour:

Zinc plated and polyester powder coated.

Operating time:

7 seconds (approximately).
